Runtime Intelligence for Windows Phone includes development tools and a managed service to monitor and protect Windows Phone 7 applications.

Application monitoring and analytics
The Runtime Intelligence Service is available as a secure cloud service. Runtime Intelligence reports include:
- Number of application sessions
- Number of unique users
- Feature usage counts and duration
- General system and stability statistics

Application protection
A commercial-grade SKU of Dotfuscator specifically targeting the Windows Phone 7 platform includes:
- IP protection: Patented renaming, control flow, string encryption, and metadata removal obfuscation transforms
- Optimization: Assembly linking and pruning

License terms and fees
Runtime Intelligence for Windows Phone is licensed exclusively for the purposes of monitoring and protecting Windows Phone 7 applications.

The licensed software and managed services will be offered at no cost to the Windows Phone 7 development community through March 31, 2011. After which, developers will be given four (4) weeks to either extend their subscription at a price to be determined or extract their data from the Runtime Intelligence Service and delete Dotfuscator for Windows Phone from their development machines.

Brandon Watson, Director, Windows Phone 7, Microsoft Corp.
PreEmptive Solutions Runtime Intelligence for Windows Phone

Application analytics and protection for Windows Phone 7 applications

Agility and automation

Components:
• One individual user license of Dotfuscator™ for Windows Phone
• One secure Runtime Intelligence Service for Windows Phone portal account

Subscription expiration: April 1, 2011
Subscription fee: none
Software prerequisite: Microsoft Windows Phone 7

In addition to obfuscation and optimization, Dotfuscator for Windows Phone 7 includes:
• Post-compile code injection (no programming or source code modification required)
  o Application instrumentation to enable application monitoring and analytics data collection
  o Opt-in policy enforcement through an extensible rule and dialogue framework
  o Offline data caching supporting application monitoring on and off of the network
  o SSL encrypted data transport
• XAP file processing and re-signing
• Support for Silverlight and XNA applications
• Standalone, command line and MSBuild interfaces

Support
Development community support including training and other development resources will be provided on-line by both Microsoft and PreEmptive Solutions
